

Assignment4

Dipesh Poudel

10/4/2021

Assignment 4: Packages in R & Tidying and Transforming Data in R

Instructions Solve/do all the examples/exercises of Unit 2 Session 1 (S6) and Session 2 (S7) slides, copy them to the attached word file with discussion and/or interpretation for review, feedback and grading for your own understanding.

Installing Packages

There are multiple ways of installing packages in R and R studio.

1. Using `install.packages()` function: We can use `install.packages()` function to install packages from CRAN repository.

```
# Example for install.packages
# Syntax: install.packages('<package_name>')
install.packages('dplyr')
```

```
## Installing package into '/home/xenon/R/x86_64-pc-linux-gnu-library/4.1'
## (as 'lib' is unspecified)
```

2. Using the Menu in the RStudio. We can use the GUI in RStudio to install packages. In RStudio, first we need to go to packages tab in the lower right hand side pane and click on install then the dialog box appears. We need to provide the package name and press install.

In the image above we need to click on the menu highlighted in red. Then we will see a dialog as shown in picture below

3. Using the `devtools` package. This package is used for installing package from github.

```
# If not installed uncomment line below
# install.packages("devtools")

#Taking Instruction from https://rqda.github.io/RQDA/
#install.packages("devtools") ## install it only if you haven't done it yet
devtools::install_github("RQDA/RQDA", INSTALL_opts = "--no-multiarch")
```

```
## Skipping install of 'RQDA' from a github remote, the SHA1 (6e25ebe3) has not changed since last inst
## Use `force = TRUE` to force installation

## Warning: 1 components of `...` were not used.
##
## We detected these problematic arguments:
## * `INSTALL_opts`
##
## Did you misspecify an argument?
```

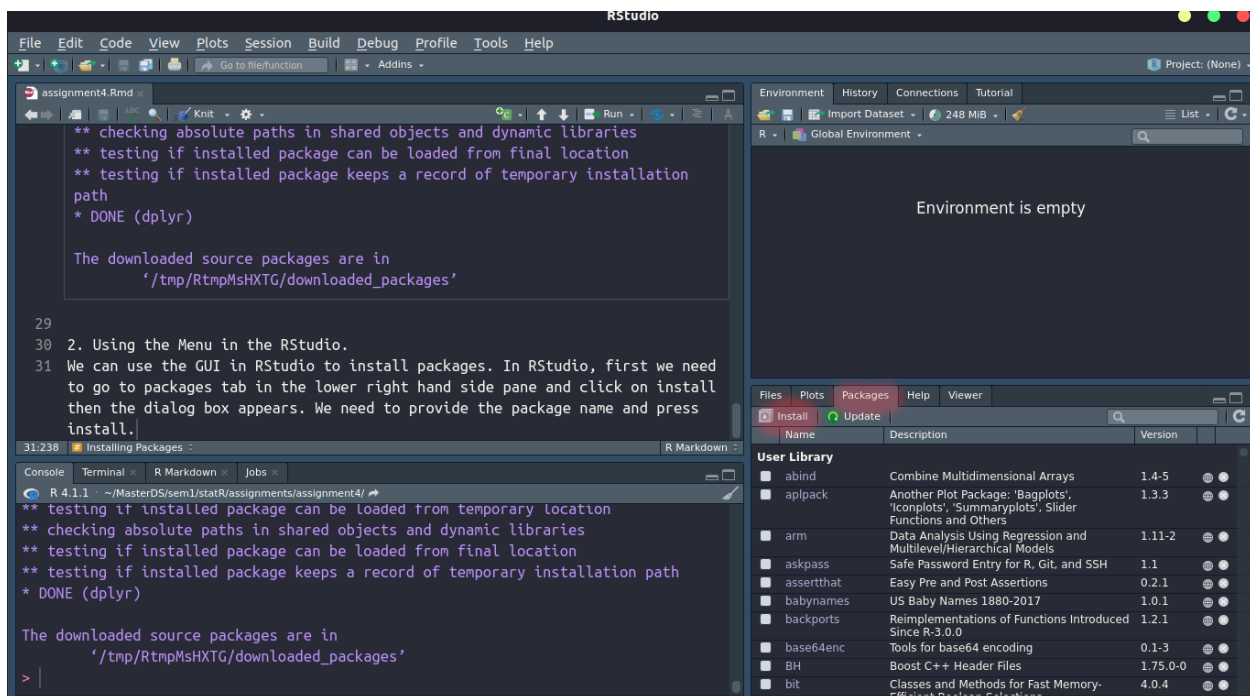

Figure 1: Installing Package from RStudio Menu

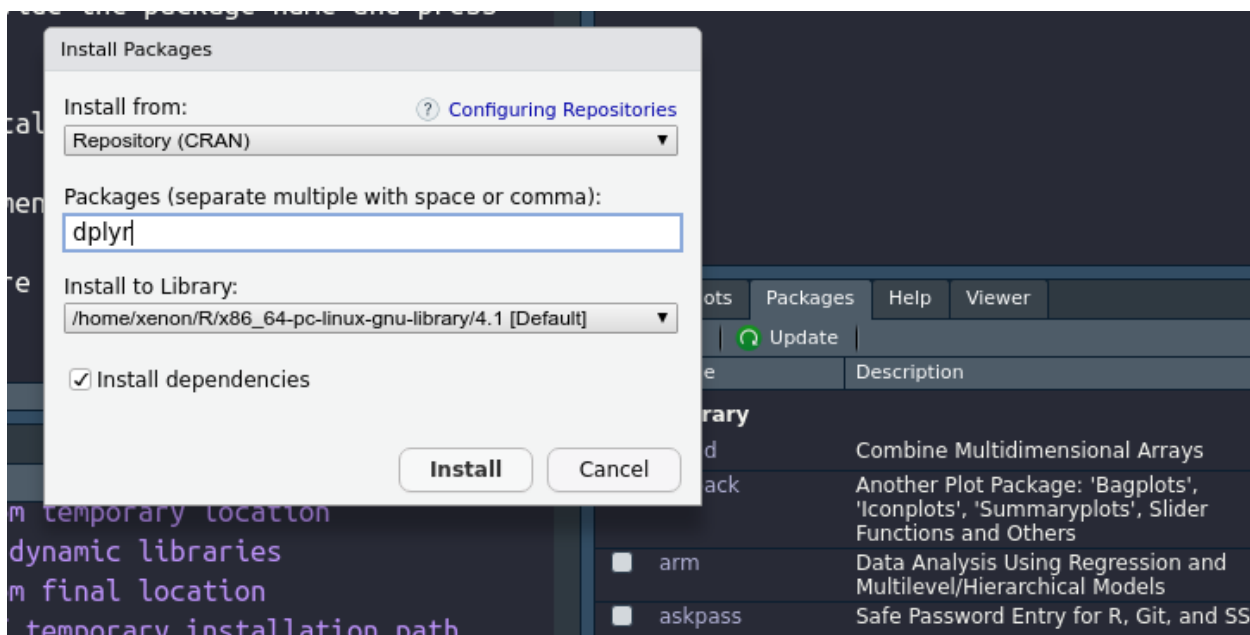

Figure 2: Install Package Dialog

In our case the package was already installed so no need to install for now.

Reading JSON Data

Reading JSON data created using a text editor.

```
File Edit Selection Find View Goto Tools Project Preferences Help
data.json x
1 {
2   "ID":["1","2","3","4","5","6","7","8"]
3   "Name":["Rick","Dan","Michelle","Ryan","Gary","Nina","Simon","Guru"]
4   "Salary":["623.3","515.2","611","729","843.25","578","632.8","722.5"]
5   "StartDate":["1/1/2012","9/23/2013","11/15/2014","5/11/2014","3/27/2015","5/21/2013","7/30/2013","6/17/2014"]
6   "Dept":["IT","Operations","IT","HR","Finance","IT","Operations","Finance"]
7 }
8
```

The screenshot below shows creation of JSON file in text editor(sublime text)

```
library(rjson)
data<-fromJSON(file="data.json")
print(data)

## $ID
## [1] "1" "2" "3" "4" "5" "6" "7" "8"
##
## $Name
## [1] "Rick"      "Dan"      "Michelle" "Ryan"      "Gary"      "Nina"      "Simon"
## [8] "Guru"
##
## $Salary
## [1] "623.3" "515.2" "611"    "729"    "843.25" "578"    "632.8" "722.5"
##
## $StartDate
## [1] "1/1/2012" "9/23/2013" "11/15/2014" "5/11/2014" "3/27/2015"
## [6] "5/21/2013" "7/30/2013" "6/17/2014"
##
## $Dept
## [1] "IT"      "Operations" "IT"      "HR"      "Finance"
## [6] "IT"      "Operations" "Finance"

# Converting the JSON data into a dataframe
json_data_frame<-as.data.frame(data)
print(json_data_frame)
```

```
##   ID   Name Salary StartDate   Dept
## 1  1   Rick  623.3   1/1/2012    IT

```

```
#table(food_market$V19)
```

What is atomic vector? An atomic vector is a one dimensional data object in R. It is created using the `c` or `vector` function

```
team_seed <- data.frame()
team_seed <- cbind(food_market)
head(food_market)
```

Converting the atomic vector to dataframe for analysis

```
